Parking Lot lighting

Here at Homeland Electric can service a number We also specialize in parking lot lighting upgrades, lighting fixtures, as well as new of different installations.including sign lighting, advertisements, pole lighting, interior as well as exterior lighting. specific to commercial and industrial facilities.

repair and related electrical services. We focuses on providing superior electrical lighting service work

Good lighting will provide safety for your facility and your employees.

Electric Vehicle Charging stations.

LEVEL 1 All plug-in vehicles come with a Level 1 charging cord that you can plug directly into a standard household 120volt outlet. Charging takes longer at this level-typically giving you about 5 miles of range per hour of charging-but it's enough for many daily drives.

Level 2 charging requires а professionally installed charging station that can be hard-wired or a cord set compatible with a 240-volt outlet. Charging at this level is faster, varying from 12 to 80 miles of range per hour

DC Fast Charging is available at many public charging stations. It is the fastest level commonly used, providing up to 40 miles of range for every 10 minutes of charging. Due to the extreme expense of these stations, they're not suitable for home installation.

For commercial use we recommend level two charging stations and above.

Office Lighting & Retrofit

Generators

Avoid downtime and keep your facility running.

There are many areas throughout Southern California that experience shortages due to wind, lightning strikes, among other issues. It is always vital to count on generators as a backup source of power for running your AC units, lighting and conveyor system when you need it most. We can provide smaller generators and even run your whole operation to avoid any downtime.

New equipment hook up.

(switchgear installation repair and transformers)

Many times business owners upgrade to new equipment, but electrical specifications vary from machine to machine. This is where we come in. We will help you run new power sources to the new equipment and provide the right voltage, amperage to avoid machine failure and even fire a hazard. Be certain you will be in good hands for any machine upgrade or new installation.
